[The Difference Between 304 and 316 Stainless Steel | Metal ...](#)

A major difference between 304 and 316 stainless steel is the chemical composition, with 316 containing a significant amount of molybdenum; typically 2 to 3 percent by weight vs only trace amounts found in 304. The higher molybdenum content results in grade 316 possessing increased corrosion resistance.

[304 vs 316 Stainless Steel | Metal Casting Blog](#)

316 stainless steel is commonly used in many industrial applications involving processing chemicals, as well as high-saline environments such as coastal regions and outdoor areas where de-icing salts are common. Due to its non-reactive qualities, 316 stainless steel is also used in the manufacture of medical surgical instruments.

316 / 316L Stainless Steel Pipe These grades of austenitic stainless steels are similar to 304 and 304L, but with the addition of molybdenum. The addition of molybdenum improves the alloys corrosion resistance, particularly with higher resistance to pitting and crevice corrosion in chloride environments.

[Type 316/316L Stainless Steels Explained - The Balance](#)

Marine grade stainless steel, called type 316, is resistant to certain types of interactions. There is a variety of different types of 316 stainless steels, including 316 L, F, N, H, and several others. Each is slightly different, and each is used for different purposes. The "L" designation means 316L steel has less carbon than 316 steel.

[304 Stainless Steel Fittings vs. 316 Stainless Steel Fittings](#)

Grade 316 is more expensive; however, it provides higher corrosion resistance, especially against chlorides and chlorinated solutions. 316 stainless is highly recommended in applications where powerful corrosives, chlorides / salt exposure is an issue since it will last longer than 304.
