Solar inertie photovoltaic (PV) systems are not particularly complex. First there are panels, which collect the sunlight and turn it into electricity. The DC signals are fed into an inverter, which converts the DC into grid-compatible AC power (which is what you use in your home). Various switch boxes are included for safety reasons, and []

[The basics of solar power - RGS Energy](#)

An active solar energy system uses a mechanism, such as solar panels on a roof, to capture sunlight and generate power. These systems involve installing panels, wiring and other materials to harness the sun's energy to power electric systems.

The 3 basic types of Solar Panels: Monocrystalline solar panels: The most efficient and expensive solar panels are made with Monocrystalline cells. These solar cells use very pure silicon and involve a complicated crystal growth process. Long silicon rods are produced which are cut into slices of .2 to .4 mm thick discs or wafers which are then processed into individual cells that are wired
