Recap: How to use the Stochastic indicator. You might not need the Stochastic indicator when you are able to read the momentum of your charts by looking at the candles, but if the Stochastic is the tool of your choice, it certainly does not hurt to have it on your charts (this goes without a judgment whether the Stochastic is useful or not).

Stochastic Analysis is the branch of mathematics that deals with the analysis of dynamical systems affected by noise. It emerged as a core area of mathematics in the late 20th century and has subsequently developed into an important theory with a wide range of powerful and novel tools, and with impressive applications within and beyond mathematics. Many systems are profoundly affected by [Stochastic - Wikipedia](#)

The word stochastic is an adjective in English that describes something that was randomly determined. The word first appeared in English to describe a mathematical object called a stochastic process, but now in mathematics the terms stochastic process and random process are considered interchangeable.

**Stochastic Oscillator [ChartSchool] - StockCharts.com**  
Developed by George C. Lane in the late 1950s, the Stochastic Oscillator is a momentum indicator that shows the location of the close relative to the high-low range over a set number of periods.

#### **Stochastic process - Wikipedia**

Introduction. A stochastic or random process can be defined as a collection of random variables that is indexed by some mathematical set, meaning that each random variable of the stochastic process is uniquely associated with an element in the set.

##### **TradingView**

The Stochastic Oscillator is a range bound momentum oscillator. The Stochastic indicator is designed to display the location of the close compared to the high-low range over a user defined number of periods.

#### **Stochastic Analysis and Applications | SpringerLink**

Kiyosi Ito, the founder of stochastic calculus, is one of the few central figures of the twentieth century mathematics who reshaped the mathematical world. Today stochastic calculus is a central research field with applications in several other mathematical disciplines, for example physics, engineering, biology, economics and finance.

completely definite and it depends on some random environment effects, i.e.  $a(t)=r(t)+\text{noise}$ , where  $r(t)$  is a nonrandom function of time variable that means the growth rate of population at time  $t$  whereas we do not know the exact behavior of noise term, we can set,  $a(t)=r(t)+a(t)W(t)$ , where  $W(t)$
